SUMMARY

Computer Science student with a problem-first mindset and strong foundations in backend development and system design. Winner of Syrotech Hackathon 2025, recognized for building an AI-powered education platform among 210+ competing teams. Currently developing scalable systems at IIIT Sri City, with a focus on clean architecture, efficient APIs, and production-quality code. Driven to create impactful, real-world technology.

EDUCATION

Indian Institute of Information Technology, SriCity

Bachelor of Technology – B.Tech, Computer Science (CGPA: 9.3/10)

Andhra Pradesh, India

Aug 2024 – Jul 2028 (Expected)

TECHNICAL SKILLS

- **Languages:** C++, JavaScript, TypeScript, Python, Java, SQL
- **Backend:** Express.js, NestJS, Supabase, REST APIs, Microservices Architecture, NGINX
- **ML/AI:** PyTorch, MNE, EEGNet, ShallowConvNet, LangChain
- **Tools & Platforms:** Git, Docker, Jira, Postman, Vercel, Figma
- **Core Subjects:** Data Structures and Algorithms, Computer Networks, Operating Systems, Object-Oriented Programming, Database Management Systems

EXPERIENCE

Teaching Assistant

Jan 2026 – May 2026

Indian Institute of Information Technology, SriCity

On-site, Part-time

- Assisted 100+ undergraduates with CS:APP Bomb Lab, covering low-level memory, bit manipulation, and GDB debugging.
- Supported learning in Signals & Systems, including signal transformations and reconstruction in MATLAB.

AI/ML Core Member

Sep 2025 – Apr 2026

Google Developer Group (GDG) On Campus, IIIT SriCity

- Participated in the Google Cloud Skills Boost program, gaining hands-on experience through cloud-based labs and challenges.
- Organized and contributed to AI/ML events and sessions as part of the GDG On Campus core team.

PROJECTS

WareHouse to LastMile Coordination Platform (Ware2Door) | *NestJS, Node.js, TypeScript*

- Developing a multi-role logistics platform using Agile Development methodology, connecting warehouse admins, transit hub managers, delivery agencies, and customers in a unified system.
- Implemented real-time shipment tracking, OTP verification, scan logs, RTO management, and SMS notifications.
- Integrated GPS-based tracking and AI-powered customer support via LangChain; focusing on reliability and scalability.

IntelliGrader – Winner of Syrotech Hackathon 2025 | *OpenAI API, NLP, Streamlit, PostgreSQL, YouTube API*

- Built a hackathon-winning AI education platform enabling students to summarize material, resolve doubts via chatbot, and receive targeted YouTube recommendations.
- Automated teacher-side answer evaluation with LLM-generated scores, feedback, and improvement insights.

EEG-Based Cognitive Stress and Motor Imagery Classification (BCI) | *Python, MNE, EEGNet, ShallowConvNet, PyTorch*

- Built an end-to-end BCI pipeline for cognitive stress detection using EEG signals from the SAM40 Dataset, with signal preprocessing and deep learning models (EEGNet, ShallowConvNet), focusing on classification accuracy and cross-subject generalization.
- Extended the system to multi-class motor imagery classification using the BCI Competition IV Dataset 2a, covering four motor imagery classes with subject-independent evaluation.
- Achieved an accuracy of 91.46 ± 1.14 percentage and balanced accuracy of 89.18 ± 1.26 percentage.
